First Edition 1997

Minesite Water Management Handbook

ISBN 0 909276 73 0

In 2008 the first edition was transcribed into electronic format,
without consideration of the accuracy or currency of the content.
Users should note that in some areas of the book, more recent
publications (post 1997) provide updated technical information.

Every effort has been made to contact the copyright
holders of material used in this book. However,
where an omission has occurred, the publisher will
gladly include acknowledgment in any future editions.

Disclaimer

This Minesite Water Management Handbook (the Handbook)
has been prepared by the Minerals Council of Australia in the
interests of encouraging excellence in environmental
management. However, the Minerals Council of Australia
accepts no liability (including liability in negligence) and takes
no responsibility for any loss or damage which a user of the
Handbook or any third party may suffer or incur as a result of
reliance on the Handbook and in particular for:

- (a) any errors or omissions in the Handbook;
- (b) any inaccuracy in the information and data on which the
Handbook is based or which is contained in the Handbook;
- (c) any interpretations or opinions stated in, or which may be
inferred from, the Handbook.

Contents

1.	<i>Introduction</i>	8
2.	<i>Statutory Requirements</i>	9
3.	<i>Planning and Principles</i>	11
3.1	INTRODUCTION	11
3.2	THE HYDROLOGIC CYCLE AND MINESITE WATER BALANCE	11
3.3	SITE DESCRIPTION	12
3.3.1	Climate	12
3.3.2	Geology and Geomorphology	12
3.3.3	Topography	12
3.3.4	Catchment Characteristics	12
3.3.5	Site Water Requirements	12
3.3.6	Vegetation and Fauna Assessment	12
3.3.7	Aquatic Ecology	13
3.3.8	Heritage Values	13
3.3.9	Downstream and Offsite Users	13
3.3.10	Monitoring	13
3.4	SITE PLAN	13
3.5	MONITORING AND DATA MANAGEMENT	14
4.	<i>Water Chemistry</i>	15
4.1	CHEMISTRY OF NATURAL WATERS	15
4.1.1	Introduction	15
4.1.2	Dissolved Versus Particulate and Total Constituents	15
4.1.3	Difference Between Organic Acid and Carbonate Water Systems	16
4.1.4	Load Versus Concentration	17
4.1.5	pH	18
4.1.6	Alkalinity	19
4.1.7	Hardness	19
4.1.8	Conductivity	20
4.1.9	Salinity	20
4.1.10	Solids	21
4.1.11	Turbidity	23
4.1.12	Oxygen Demand (Dissolved Oxygen, BOD and COD)	23

4.1.13	Anions and Cations	24
4.1.14	Metals (Trace Metals, Heavy Metals, Metal Speciation)	25
4.1.15	Nutrients	25
4.1.16	Oils, Greases and Hydrocarbons	26
4.1.17	Organics, Natural Organic Matter, Dissolved Organic Carbon	26
4.1.18	Colour	27
4.1.19	Cyanide	27
4.1.20	Odour and Taste	28
4.1.21	Radionuclides	29
4.2	BIOLOGICAL ASPECTS OF WATERS	30
4.2.1	Micro-organisms	30
4.2.2	Algal Blooms	31
4.2.3	Toxicity and Ecosystem Health	31
4.2.4	Factors Influencing Bioavailability and Toxicity of Contaminants	32
4.2.5	Bio-monitors, Bio-accumulation and Bio-amplification	32
4.3	NATURE OF WATERS	33
4.3.1	Beneficial Use	33
4.3.2	Assimilative Capacity	33
4.3.3	Receiving Waters	33
5.	<i>Water Sampling and Flow Measurement</i>	34
5.1	INTRODUCTION	34
5.2	PRINCIPLES AND PURPOSE OF MONITORING	34
5.3	COMPLIANCE MONITORING	35
5.3.1	Ambient, Point Source and Non-point Source pollution	36
5.3.2	Mixing Zones	36
5.4	DATA COLLECTION - QUALITY	36
5.4.1	Monitoring Design	36
5.4.2	Identification of Key Monitoring Parameters	37
5.4.3	Initial Screening Program	37
5.4.4	Sampling Locations	37
5.4.5	Sampling Frequency	37
5.4.6	Sampling Techniques and Design	38
5.4.7	Sample Transportation	39
5.4.8	Sample Analysis	39
5.4.9	Data Management	40
5.4.10	Laboratory, Pilot Plant and Leach Tests	40
5.5	DATA COLLECTION - QUANTITY	40
5.5.1	Rainfall Reading	41
5.5.2	Flow Recording	41

5.6	GROUNDWATER	42
5.6.1	Groundwater Mapping	42
5.6.2	Testing and Monitoring	43
5.6.3	Groundwater Parameters	46
5.6.4	Prediction of Groundwater Characteristics and Responses	46
5.7	REVIEW OF MONITORING DATA	46
6.	<i>Water Supply</i>	48
6.1	SURFACE WATER	48
6.1.1	Catchment Yield	48
6.1.2	Recycling of Water	49
6.2	GROUNDWATER	49
6.2.1	Sources of Supply	49
6.2.2	Security of Supply	49
7.	<i>Exploration</i>	53
7.1	SURFACE WATER	53
7.1.1	Surface Water Data Collection	53
7.1.2	Access Tracks	54
7.1.3	Exploration Sites	54
8.	<i>Open Cut Mines</i>	56
8.1	SURFACE WATER RUNOFF	56
8.1.1	Flood Mitigation	56
8.1.2	Methods of Flood Mitigation	57
8.1.3	In-Pit Drainage	59
8.1.4	Interception Drainage Around Pit	60
8.1.5	Sediment Containment	61
8.2	GROUNDWATER	62
8.2.1	Groundwater Inflow	63
8.2.2	Managing Groundwater Inflow	63
8.3	WATER QUALITY	65
8.3.1	Pit Water Disposal	65
8.3.2	Acid Drainage	65
8.3.3	Salinity	66
8.4	PIT CLOSURE	66

9.	<i>Underground Mines</i>	68
9.1	SURFACE DRAINAGE AWAY FROM HEAD WORKS	68
9.2	GROUNDWATER INFLOW	68
9.2.1	Managing Groundwater Inflow	68
9.3	WATER QUALITY	69
9.3.1	Treatment and Disposal of Underground Mine Water	69
10.	<i>Heap Leach Processes</i>	70
10.1	INTRODUCTION	70
10.2	PLANNING FOR HEAP LEACHING	70
10.2.1	Baseline Evaluation	70
10.2.2	Rainfall Events, Acceptable Risk, Contingency Planning	70
10.2.3	Baseline Groundwater Monitoring	71
10.2.4	Closure Planning	71
10.3	SOLUTION CONTROL DURING OPERATIONS	72
10.3.1	Maintenance of Drain and Pond Capacity	72
10.3.2	Integrity of the Pad or Liner	72
10.3.3	Integrity of Piping and Valves	72
10.4	WATER MANAGEMENT ON CLOSURE	72
10.4.1	Criteria for Long-term Leachate Quality	72
10.4.2	Residues and Long-term Contaminated Site Management	72
11.	<i>Waste Dumps</i>	73
11.1	WASTE DUMP CONSTRUCTION FOR WATER MANAGEMENT	73
11.2	SURFACE WATER	73
11.2.1	Location of Waste Dumps	73
11.2.2	Erosion on Waste Dumps	73
11.2.3	Interception Drainage Around Waste Dumps	74
11.2.4	Sediment Containment Around Waste Dumps	75
11.3	GROUNDWATER	75
11.3.1	Infiltration to Groundwater	75
11.3.2	Monitoring	76
11.4	WATER QUALITY	76
11.4.1	Acid Drainage	77
11.4.2	Salinity	77
11.4.3	Suspended Solids	78
11.4.4	Leachate and Other Constituents	78

12. Tailings Water Management	79
12.1 DISPOSAL METHODS	79
12.2 CHARACTERISTICS AND MANAGEMENT OF TAILINGS WATER	80
12.2.1 Nature of the Water	80
12.2.2 Management	80
12.3 SEEPAGE MANAGEMENT	80
12.3.1 Seepage Control	80
12.3.2 Monitoring	81
12.3.3 Water Control	81
13. Mine Infrastructure	82
13.1 PROCESS PLANT	82
13.1.1 Characteristics	82
13.1.2 Containment and Treatment Technologies	82
13.2 INDUSTRIAL AND WORKSHOP AREAS	83
13.2.1 Containment and Treatment Technologies	83
13.3 HAUL ROADS	84
13.3.1 Environmental Issues	84
13.3.2 Surface Water Drainage	84
13.3.3 Groundwater Drainage	84
<i>References</i>	86
<i>Glossary</i>	88
<i>List of Tables</i>	
Table 2.1: Typical State and Commonwealth Legislation	9
Table 4.1: Typical Conductivity Range of Waters	20
Table 5.1: Key Planning Steps for Water Monitoring	35
Table 5.2: Selection Criteria for Establishing Sampling Sites	38
Table 5.3: Advantages and Disadvantages of Using Numerical Models	47
Table 6.1: Sources and Uses of Recycled Water	50
Table 10.1: Suggested Minimum Design Event Criteria for Heap Leach Operations	71

Fact Sheet No. 11:	Groundwater	124
Fact Sheet No. 12:	Numerical Modelling	125

Acknowledgments

The Minesite Water Management Handbook has undergone a considerable gestation period and many individuals have assisted in its production. It is with much appreciation that the Minerals Council of Australia acknowledges the contributions of these people, all experts in their individual fields, who gave freely of their time: Raj Aseervatham, Denis Brooks, Michael Cox, Geoff Day, Tom Farrell, Kurt Hammerschmid, Gavin Murray, Pamela Ruppin, Peter Roe, Ian Wood, and Ray Woods. The comments of many other individuals on earlier drafts were invaluable in efforts to treat such a broad range of material as fully and accurately as possible. The Minerals Council of Australia would also like to acknowledge the companies and organisations for whom the individuals work. All input has been most valuable.
